

Complete calibration system

7706

Art.No. **96521074**
GTIN **4018754180967**
Model **7706-11PC**

Label. Complete calibration system Measuring-R.20-3000N·m f.transducer

Features.

- Measurement without displacement of the force application point
- Due to a special force transmission system, the mechanical calibration device no. 7791 avoids a displacement of the point of application of force during the calibration process.
- driven by the handwheel, the lever mounted below the test rail is moved linearly by a spindle
- the linear movement is converted into a rotary movement which acts on the transducer
- the torque spanner to be calibrated remains constant in its position during the entire calibration process
- in this way, measurement errors resulting from a shift of the point of application of the force are avoided
- the torque spanner is automatically aligned horizontally by a low-friction ball bushing
- another ball bushing ensures friction-free support of the torque wrench
- the resulting reduction of the transverse forces on the transducer and the friction on the torque wrench support leads to a reduction of the measuring errors.
- Patents pending
- Included in delivery:
 - Transducer
 - Square adapter
 - USB adapter and cable for transferring measurement data to a personal computer
 - Administration software for calibration certificates

Advantages.

Measurement without shifting the point of application of force
